PROJECT DETAILS

PROJECT : 1

Title : SiteBlocker

Description : This python based project is basically block the website which we mentioned in the program. We can give time frame for what time we want to block the given website and after that time the website will be unblocked automatically.

PROJECT : 2

Title : GUI based BookStore

Description : In this project I used Tkinter python library for graphical user interface of desktop app. For backend I used sqlite3. In this project we can add, update and delete entries.

PROJECT : 3

Title : IMDB Website Scraping

Description : This project is basically a Web scraping project. In this project I scraped the IMDB website with the help of BeautifulSoup and Selenium.

PROJECT : 4

Title : Telegram ChatBot

Description : In this project I have created a telegram chat bot with the help of DialogFlow. I have integrate the api from telegram auth and used DialogFlow to do the function. This bot will chat with you and give answers to the questions on Realtime basis.

PROJECT : 5

Title : Crypto Currency Site

Description : This project is django based and I have used python, html and bootstrap as well. In this project we will get crypto currency news as well as the conversions of crypto currencies. I have used the free crypto API for the realtime news and the conversions of currencies.

PROJECT : 6

Title : Ecommerce Website

Description : This Ecommerce Website is python/Django based full stack Web application. For frontend I used bootstrap, html and css. The payment gateway used in this project is RazorPay.
